Cognitive Stupidity

Introduction

The brain of an infant may be the blank tablet envisaged by Locke,[1] but as it is shaped by both experience and language it develops into the mind of an adult. As the character of the maturing individual becomes defined, the mind shapes experiences decreasingly according to immediate stimuli themselves and increasingly according to linguistic interpretations of and emotional reactions to perceptions. Thus, the environment does not dictate human behavior but provides a context for its expression.

Keywords: body language, music, environmental stimuli
