Abstract

Fatzorb и Samyun Wan Slim Ultra and as new psychoactive drugs. Our studies have shown that these drugs causes psychotic disorders. Despite widespread use in Europe, spice products were introduced to the United States only recently. In the world literature data on the Fatzorb и Samyun Wan Slim Ultra and intoxication clinic is not enough. To provide preliminary management experience for future cases, we describe 5 patients with Intoxication from Fatzorb и Samyun Wan Slim Ultra after they took these substances for weight loss. However, these substances caused hallucinations and delusions. All patients were examined at the Republican Health Center of the Republic of Azerbaijan.

Keywords: psychotic conditions; samyun wan slim ultra; fatzorb slimming capsules

Introduction

It is known that in the media, including on the Internet, various means, methods and so-called nutritional supplements are advertised for weight loss. Recently, among such drugs, it is necessary to note Fatzorb and Samyun Wan Slim Ultra capsules.

According to the manufacturers of the Fatzorb capsule, this is the original fat burner from France. The drug allows you to more effectively reduce body weight, being in comfortable conditions without strict diets and enhanced training. The medicine allows you to reduce body volume by correcting the size of the fat layer. At the same time, the tone increases and the silhouette is effectively tightened due to the preservation of muscle fibers. As a result, the body is cleansed of harmful and toxic compounds, and the body becomes slim.

According to manufacturers, Samyun Wan Slim Ultra is used for weight loss for people aged 18-65 years.

According to manufacturers, they help: lose weight; get rid of fat deposits on the sides, abdomen, buttocks, and other parts of the body; normalize sleep patterns; improve skin condition; strengthen immunity; be cleansed of sludge.

Older people are encouraged to lose weight slowly. Therefore, before taking it, you should consult your doctor.

Materials and methods of research

Ingredients of Fatzorb'

In the formula of Fatzorb for losing weight, there are no chemically obtained substances at all. It does not harm health, because it does not contain steroids and GMOs. The natural composition of Fatzorb is built on the principle of enhancing the action of each component. The capsule formula is based on the following organic ingredients:

- garcinia - lowering the concentration of cholesterol, leptin, suppression of hunger, fatty acids and triglycerides, increased synthesis of serotonin, improved mood, acceleration of fat oxidation, activation of glycogen synthesis to speed up the satiety process;
- dandelion root - light laxative and diuretic properties allow you to get rid of excess fluid, toxins and toxins, lower blood glucose, neutralize inflammation and improve bile secretion, general strengthening, antiviral, antispasmodic, rejuvenation, sedative, secretory;
- green coffee - antioxidant, prevention of fat deposits, acceleration of metabolism, elimination of edema and fatigue, improvement of digestion;
- cactus fruit - cleansing the intestines in a natural way, saturation with natural sugar, elimination of energy deficiency, improved

recovery after physical activity, improved thermoregulation, increased strength of blood vessels and bones;

- Japanese spirea - suppression of appetite, cravings for harmful foods high in sugar and calories, strengthening immunity, elimination of edema, elimination of cellulite and skin care;
- black tea leaf - toning, normalization of the nervous system, increased physical activity and cognitive abilities, active weight loss;
- anise seed - antiseptic, improvement of water-salt balance, appetite suppression by essential oils.

Samyun wan slim ultra capsules are a new generation drug containing natural ingredients. This is an updated formula of a nutritional supplement that has caused a real sensation all over the world. Now even more concentrated extracts of natural ingredients are used for the production of tablets. The desired result is achieved much faster. After the end of the course, the lost weight is not returned.

The Samyun Wan Slim Ultra slimming drug allows you to reduce body weight by 12-15 kg in just a month. It does not contain chemicals and is absolutely harmless. Biologically active substances contained in concentrated natural extracts penetrate to the places of accumulation of fat cells. This improves blood circulation in the subcutaneous region, loosens dense deposits, and breaks down fat. The slimming agent reduces appetite, prevents the absorption of carbohydrates and fatty acids from food, and prevents the appearance of new deposits.

Composition Samyun wan slim ultra

The dietary supplement contains only natural ingredients: lotus leaves;

garcinia fruits; pumpkin pulp; fennel; lactose monohydrate; herbal extract.

Lotus leaves have powerful fat-burning properties. They contribute to the accelerated transport of fatty acids to the liver for breakdown. Lotus reduces appetite, prevents the absorption of proteins, fats, carbohydrates from food.

The thin skin of Garcinia Cambogia fruit contains a rare compound that is used for rapid weight loss. This is citric hydroxy acid. Thanks to it, the body is saturated 2-3 times faster. It also contributes to the disappearance of cravings for flour and sweets.

Pumpkin is a rich source of vitamins C, E, T, D, PP, F. It contains a lot of magnesium, iron, and potassium. Pumpkin extract is an excellent prevention of cancer. It lowers cholesterol levels, cleanses blood vessels from plaques, and normalizes blood pressure.

Fennel improves peristalsis, cleanses the intestines of toxins. It gives strength and energy. It contains compounds that interfere with the absorption of fats. Fennel activates the pancreas, which secretes fat-burning enzymes.

Lactose monohydrate is a unique product derived from milk. It is an excellent source of energy, charging and toning the body. In medicine, it is used to maintain beneficial intestinal microflora.

Excess weight creates a complex problem for the body, relating to a variety of factors. Therefore, a complex of extracts of medicinal herbs, which have a positive effect on overall health, was added to the composition of dietary supplements. In particular, they normalize blood pressure, lower cholesterol levels, and activate protective mechanisms.

The weight loss drug consists of highly concentrated plant extracts that are completely harmless to the body.

Instructions for use

BAA Samyun Wan Slim Ultra has a powerful effect. Therefore, the capsule is taken 1 pc every other day. Time of day - the first half of the day, 40 minutes before or after a meal. Each tablet should be taken with at least 200 grams of water. During the day, it is recommended to drink plenty of fluids (at least 2 liters).

Contraindications

The biocomplex is made from natural natural components. It is absolutely safe and can be used at any age after 18 years. However, with some diseases, sudden weight loss can adversely affect health. Therefore, you can not use dietary supplements if doctors diagnose: heart failure, ischemia, angina pectoris; cirrhosis, dystrophy, other severe diseases of the kidneys and liver; stomach ulcer; poor blood clotting; mental disorders.

People over 65 years of age should consult a doctor before taking it.

Samyun Wan Ultra Side Effects

Diet pills are made from medicinal herbs that can sometimes cause allergies. People with individual intolerance may experience: headache; nausea; dry mouth; dizziness.

These symptoms are temporary and non-toxic. If their strength and frequency increase, the drug should be stopped.

The drug for weight loss is available in the form of capsules. They are hermetically sealed in branded packaging that does not allow moisture to pass through. Manufacturers of Samyun Wan Slim Ultra only sell through the online store. We offer the best diet pills cheap, with delivery. Residents of Kazakhstan can get dietary supplements by courier. In other regions of Russia, Samyun Wan Slim Ultra food supplement will be sent by mail.

As can be seen from the instructions of the manufacturers of the Fatzorb and Samyun Wan Slim Ultra capsules, after taking these substances, there is not a single word about psychotic disorders.

We were approached by 5 women aged 25-30 years. All women who took Fatzorb and Samyun Wan Slim Ultra really lost 10-12 kg of weight within 30-35 days.

Opiate Use	Never tried
Hallucinogen Use	Never tried
Other psychoactive drugs	Never tried
Prior history of psychiatric disturbances	Never tried
Familial drug use	Never tried

Table: Study Population Status

Study results

General characteristics of all clinical cases were as follows:

The clinical features of visual hallucinations are known to have diagnostic value. Cinematographic hallucinations are commonly seen in intoxications, including alcohol psychosis. The nature of psychoses during intoxication is more characteristic of demonic and polypic, zoological hallucinations. Numerous visual hallucinations with impaired knowledge of time and space are characteristic of delirium. Hemiopptic hallucinations are observed in CNS organic lesions. There are visual hallucinations in the structure of the epileptic aura. Visual hallucinations with pantophobic and fantastic content occur in oneeroid disorders of thinking. Micro- and macroptic hallucinations occur during organic brain damage.

Explanatory or evaluative sounds reflect the idea of "voices" about the patient's behavior. Their content is different - benevolent, bitter, poisonous. Ironically, sounds like reprimanding, blaming, accusing. They provide information about the current, past and future behavior of "voices". Imperative hallucinations are those that command or prohibit something that is most dangerous to both the patient and the environment. Thus, those around him may order the patient to be killed or the patient to be killed by one of the people around him. Sometimes voices give "smart" advice, such as going to a psychiatrist and so on.

Some features of verbal hallucinations are of diagnostic importance. Intimidating hallucinations indicate a poaranoid change of mood, auditory hallucinations that provoke guilt or suicide indicate depression, and benevolent, praiseworthy voices indicate high mood. Thoughts, echoes, iterative (often repeated) contrast hallucinations are often found in schizophrenia. It is observed in alcoholic psychoses that the sounds are related to alcohol.

According to the content (the story of delusion): 1) The ideas of persecution delusion (persecution, influence, staging, litigation, petition, poisoning, harm, harm, jealousy); 2) Ideas of self-aggrandizement (reformism, wealth, passionate attraction, ascension. Inventiveness); 3) Suicide delusion ideas.

In the end, it should be noted that the commanding sounds forced the patients to commit socially dangerous acts and to take the lives of those closest to them.

Discussions

Two FDA-approved drugs for weight loss: Topiramate and Phentermine / topiramate.

Topiramate

Synonyms: Topamax, Epitamax.

Anticonvulsant, voltage sensitive sodium channel modulator

Generally defined

(FDA approved thick)

Partial convulsions (for immediate relief: supplement for adult and pediatric patients aged 2-16 years; for long-term release: blocks tension-sensitive sodium channels by an unknown mechanism (monotherapy or supplement for patients older than 2 years)

Primary generalized tonic-clonic seizures (complementary and monotherapy; adults and children over 2 years)

Convulsions associated with Lennox-Gastaut syndrome (additional; 2 years and older)

Migraine prevention (12 years and older)

Chronic weight loss management (in addition to a reduced calorie diet and increased physical activity) in adults with a body mass index (BMI) of at least 30 kg / m² (obesity) or at least 27 kg / m² (overweight) is a disease associated with at least one weight gain [with phentermine (Qysmia)]

Bipolar disorder (helper; no longer developing)

Weight gain with psychotropic drugs

Eating Disorders

Phentermine / topiramate

Synonyms: Qsymia

Class: Norepinephrine and dopamine reuptake inhibitor (phentermine), in combination with stress-sensitive sodium channel modulator (topiramate); weight management drugs

Generally defined

FDA approved for the following cases

Comorbid weight-related condition with chronic weight management (in addition to a reduced calorie diet and increased physical activity) in adults with an initial BMI of at least 30 kg / m² (obesity) or at least 1 to at least 27 kg / m² (overweight)

Class: Norepinephrine and dopamine reuptake inhibitor (phentermine) combined with a voltage-sensitive sodium channel modulator (topiramate); weight management medication

Chronic weight management (adjunct to reduced-calorie diet and increased physical activity) in adults with an initial BMI of at least 30 kg / m² (obese) or at least 27 kg / m² (overweight) in the presence of at least 1 weight-related comorbid condition

- Partial onset seizures (for immediate-release: adjunct for adults and pediatric patients 2–16 years of age; for extended-release: monotherapy or adjunct for patients 2 years and older)

- Primary generalized tonic – clonic seizures (adjunct and monotherapy; adults and pediatric patients 2 years of age and older)

- Seizures associated with Lennox-Gastaut syndrome (adjunct; 2 years of age and older)

- Migraine prophylaxis (ages 12 and older) Chronic weight management

(adjunct to reduced calorie diet and increased physical activity) in adults with an initial body mass index (BMI) of at least 30 kg / m² (obese) or at least 27 kg / m² (overweight) in the presence of at least one weight-related comorbid condition [in combination with phentermine (Qsymia)]

- Bipolar disorder (adjunctive; no longer in development)
- Psychotropic drug-induced weight gain
- Binge eating disorder

Conclusion

Thus, despite the availability of officially approved drugs for weight loss, drugs Fatzorb и Samyun Wan Slim Ultra that cause severe psychotic disorders are used.

Limitation of the study

First, our small study group and we recommend that these results be replicated in a larger group so that effect sizes can be more precisely estimated. Second, it is necessary study of possibility generalizability these data to male. Notwithstanding these limitations, this study suggests that, psychotic conditions after taking Samyun Wan Slim Ultra and FATZORB slimming capsules poses a great threat to human life.

Competing Interests

None.
